

Fullerton Lux Funds - Asian Bonds - Class A (SGD) Dist

December 2025

Investment Objective

The investment objective of the Fund is to generate long term capital appreciation for investors.

Investment Focus and Approach

The Investment Manager seeks to achieve the objective of the Fund by investing in fixed income or debt securities denominated primarily in USD and Asian currencies, issued by companies, governments, quasi-governments, government agencies or supranationals in the Asian region.

The Asian countries include but are not limited to China (including Hong Kong SAR and Taiwan), South Korea, India, Thailand, Malaysia, Singapore, Indonesia, the Philippines, Pakistan and Vietnam.

SFDR Classification:

Article 8 fund.

In line with its ESG methodology, the fund promotes environmental characteristics but does not commit to make environmentally sustainable investments as defined in the taxonomy regulation.

Performance (%)

| | 1 mth | 3 mths | 6 mths | 1 yr | 3 yrs | 5 yrs | 10 yrs | Sl. Ann. Ret. | Sl. Ann. Vol. |
|----------------------------|-------|--------|--------|-------|-------|-------|--------|---------------|---------------|
| Fund (bid-to-bid) | 0.06 | 0.21 | 2.78 | 4.77 | 3.76 | -1.08 | 1.83 | 2.19 | 4.71 |
| Fund (offer-to-bid) | -4.70 | -4.56 | -2.12 | -0.22 | 2.08 | -2.05 | 1.33 | 1.81 | NA |
| Benchmark | -0.03 | 0.50 | 2.42 | 5.32 | 4.45 | 0.46 | 2.78 | 2.84 | 4.14 |

Returns of more than 1 year are annualised. Returns are calculated on a single pricing basis in SGD with net dividends and distributions (if any) reinvested. Offer-to-bid returns include an assumed preliminary charge of 5% which may or may not be charged to investors. Past performance is not indicative of future returns.

Market Review

Asian USD credit markets delivered positive returns in December, as measured by the J.P. Morgan Asian Credit Index, with performance driven primarily by spread-related gains that more than offset the headwind from higher rates. Duration-related returns were negative as U.S. Treasury yields moved higher over the month; however, resilient investor demand and stable market technicals supported spread compression across much of the Asian credit universe, underpinning overall performance. In the U.S., Treasury markets were influenced by a combination of policy signals, economic data releases, and global spillovers, resulting in a modest steepening of the yield curve. While the Federal Reserve delivered its third rate cut of the year, this was outweighed by signs of continued economic resilience, rising government bond yields in Europe and Japan, and heavy corporate issuance early in the month.

Within Asian credit, high-yield outperformed investment grade, supported by stronger spread compression that more than offset the relatively modest impact from U.S. Treasury moves, while investment-grade performance was more constrained by duration effects. At the country level, Pakistan, Macau, Vietnam and Mongolia were among the stronger performers, where positive spread returns comfortably outweighed the negative contribution from U.S. Treasury duration. In contrast, Taiwan, Malaysia and Hong Kong lagged on a relative basis, although returns in these markets remained modestly positive overall. Sector performance showed a similar pattern of differentiation. Metals & mining and consumer-related sectors were among the top performers, benefiting from spread tightening amid improving fundamentals and sustained demand for carry. Conversely, weaker performance was observed in sectors such as TMT (Technology, Media, and Telecommunications), where spread widening driven by sector-specific risks or profit-taking pressures compounded the drag from higher U.S. Treasury yields, resulting in more subdued outcomes.

Investment Strategy

We frame 2026 as a year of two halves. The first half is likely to be characterised by firmer global growth, supported by fiscal stimulus across major economies including the U.S., China, Japan and Germany, reduced tariff-related uncertainty, and the lagged effects of monetary easing. As the year progresses, growth momentum is expected to moderate as easing cycles mature and fiscal support gradually fades. In the U.S., growth is expected to exceed consensus expectations, underpinned by healthy private-sector balance sheets and continued fiscal spending, even as labour-market conditions continue to normalise. After delivering early "insurance cuts" to cushion labour-market softness, the Federal Reserve is likely to remain data-dependent, balancing growth support with the need to secure a durable decline in inflation.

Within Asia, the macro backdrop remains constructive. Positive spillovers from the U.S. and China, improving intra-Asia trade flows, and the region's rising competitiveness in higher value-added exports linked to the AI cycle continue to support activity, particularly in Taiwan, Korea, Singapore and parts of ASEAN. China's fiscal stance is expected to remain supportive in 2026, with growth momentum stronger in the first half reflecting front-loaded easing and the delayed passthrough of late-2025 stimulus. While the property sector remains in a de-leveraging phase, much of the adjustment appears to be behind us, with incremental policy support helping to stabilise sentiment and reduce downside tail risks.

From a portfolio perspective, we expect a more range-bound global rates environment, where carry is likely to play a larger role in fixed income returns as the pace of policy easing slows. We remain cautious at the long end of the curve, as elevated U.S. policy uncertainty and a widening fiscal deficit could warrant a higher term premium and result in a steeper U.S. Treasury yield curve. On the credit side, the portfolio maintains an overweight to high yield within a disciplined risk framework. We actively trade around high-yield exposures, adjusting positions based on relative valuations and issuer-specific developments while keeping overall risk balanced. With valuations relatively tight, investment-grade spreads are likely to remain broadly stable on a year-on-year basis. By contrast, select segments of high yield may retain scope for modest spread compression, particularly in the first half of the year, supported by attractive carry and pockets of improving fundamentals. Overall, this environment favours a selective, carry-focused approach that seeks to balance income generation with prudent risk management.
