

Fullerton Lux Funds - Asian Bonds - Class A (SGD) Dist

May 2026

Investment Objective

The investment objective of the Fund is to generate long term capital appreciation for investors.

Investment Focus and Approach

The Investment Manager seeks to achieve the objective of the Fund by investing in fixed income or debt securities denominated primarily in USD and Asian currencies, issued by companies, governments, quasi-governments, government agencies or supranationals in the Asian region.

The Asian countries include but are not limited to China (including Hong Kong SAR and Taiwan), South Korea, India, Thailand, Malaysia, Singapore, Indonesia, the Philippines, Pakistan and Vietnam.

The Fund may also invest (i) up to 15% of the Fund's Net Asset Value in contingent convertible securities (including perpetual contingent convertible securities) and/or (ii) up to 15% of the Fund's Net Asset Value in perpetual bonds (excluding perpetual contingent convertible securities). The Fund may invest in money market instruments, money market funds, term deposits, bank deposits and other eligible liquid assets for treasury purposes and in case of unfavourable market conditions.

SFDR Classification:

Article 8 fund.

In line with its ESG methodology, the fund promotes environmental characteristics but does not commit to make environmentally sustainable investments as defined in the taxonomy regulation.

Performance (%)

	1 mth	3 mths	6 mths	1 yr	3 yrs	5 yrs	10 yrs	Sl. Ann. Ret.	Sl. Ann. Vol.
Fund (bid-to-bid)	0.34	-1.22	-0.36	3.53	2.90	-1.00	1.37	2.09	4.71
Fund (offer-to-bid)	-4.44	-5.93	-5.10	-1.40	1.24	-1.96	0.88	1.72	NA
Benchmark	0.18	-1.29	-0.63	2.84	3.31	0.64	2.26	2.71	4.12

Returns of more than 1 year are annualised. Returns are calculated on a single pricing basis in SGD with net dividends and distributions (if any) reinvested. Offer-to-bid returns include an assumed preliminary charge of 5% which may or may not be charged to investors. Past performance is not indicative of future returns.

Benchmark: JACI Investment Grade Total Return – SGD Hedged Index.

Market Review

Asian USD credit markets, as represented by the J.P. Morgan Asia Credit Index (JACI), delivered positive returns in May, with performance driven primarily by credit spread tightening. Both investment-grade and non-investment-grade segments advanced during the month, although high-yield bonds outperformed their investment-grade counterparts as stronger spread compression, alongside their higher carry, provided a meaningful boost to returns. Investor sentiment remained constructive despite episodes of volatility, supported by resilient corporate fundamentals, favourable market technicals and continued demand for yield.

Market attention remained focused on the Iran–US conflict, with fluctuations in oil prices and evolving ceasefire negotiations contributing to periods of volatility in global rates markets. In the US, Treasury yields generally moved higher amid a combination of stronger-than-expected economic data, persistent inflation pressures and a more hawkish reassessment of the Federal Reserve policy outlook. Yields rose sharply in the first half of the month, with the 30-year Treasury yield reaching its highest level since 2007 and the 10-year Treasury yield briefly approaching 4.7%, before retracing part of the move as oil prices declined and expectations of a diplomatic resolution to the conflict improved. Overall, the Treasury curve bear-flattened over the month, with front-end yields rising more than longer-dated maturities as markets reduced expectations for near-term Fed easing.

At the country level, Sri Lanka and Pakistan were among the strongest-performing markets, with returns driven overwhelmingly by spread tightening as investors continued to reprice credit risk more favourably. In contrast, the Philippines, Singapore and Korea lagged the broader market, as more limited spread compression resulted in relatively subdued returns. From a sector perspective, Real Estate, Metals & Mining and Oil & Gas were the best-performing sectors, benefiting from robust spread tightening and improving risk appetite. By contrast, Transport, Utilities and Infrastructure were the weakest-performing sectors, as spread performance was more muted and provided less support to overall returns.

Investment Strategy

Looking ahead, corporate fundamentals in Asia are generally healthy, with balance sheets remaining resilient, refinancing risks manageable and financial conditions still supportive for most issuers. That said, the regional backdrop has become more differentiated. Selected sectors in North Asia continue to benefit from the AI and broader capital expenditure cycle, which is supporting earnings resilience, while some economies such as Indonesia are facing a more challenging macro backdrop.

The external macro environment remains an important consideration. US growth has stayed resilient, labour-market conditions remain firm, and inflation risks continue to be skewed to the upside through oil, AI-related capex and broader fiscal support. In our view, this should keep the Federal Reserve (Fed) cautious through 2026, with little urgency to ease policy. As a result, the higher-for-longer Fed backdrop is likely to keep Treasury yields elevated for now, even though yields could gradually move lower over the medium term as inflation moderates and markets begin to look ahead to future policy easing next year. Near-term rate volatility is therefore likely to persist. In practical terms, this supports keeping duration broadly neutral to slightly defensive today, while retaining a medium-term bias to add on better entry points.

Market technicals remain supportive. Limited net supply and subdued primary issuance continue to provide a favourable backdrop for the asset class, helping to offset more mixed investor flows and periodic bouts of market volatility. At the same time, valuations present a more balanced picture. Credit spreads across many segments of the Asian credit market remain relatively tight by historical standards, reflecting the region's resilient fundamentals, limited supply and strong regional investor demand. While all-in yields remain attractive, particularly relative to recent history, we believe future returns are likely to be driven increasingly by carry, security selection and relative value opportunities rather than broad market beta. Against this backdrop, we remain selective in adding risk and continue to favour carry opportunities through an overweight allocation to high-yield credits, complemented by selected non-benchmark exposures where valuations are more compelling and diversification benefits can be enhanced.
