

# Fullerton SGD Heritage Income

May 2022

## Investment Objective

The investment objective of the Fund is to generate regular income and long term capital appreciation for investors.

The Fund will invest primarily in a diversified portfolio of collective investment schemes, other investment funds, securities, including but not limited to fixed income securities, equities, real estate investment trusts (“REITs”), money market instruments and cash as deemed appropriate by us in accordance with its investment objective. In normal market conditions, the Fund aims to invest around 50% of the Fund’s NAV in Singapore securities (defined by country of risk) and/or SGD denominated securities, cash and cash equivalents, and/or non-SGD fixed income securities hedged back to SGD. The Fund may also invest in developed market equities (ex-Asia) for diversification reason.

## Fund Information

<b>Fund Size</b>	SGD 990.41 million
<b>Base Currency</b>	SGD
<b>Preliminary Charge</b>	Currently up to 3%
<b>Dealing Frequency</b>	Every Business Day
<b>Subscription Mode</b>	Cash, SRS

## Manager’s Commentary

### Market Review

Weakness in equity markets after a bounce in March resumed in April and into May before market technicals prompted a short cover rally. MSCI AC World and S&P 500 indices managed to close the month flat while MSCI Asia and MSCI Europe recovered from short term oversold positions to return 0.5% and 0.8% respectively in USD terms. The ascend of DXY, the dollar index, may have paused after a 17% rally since May 2020.

Monetary policy tightening by global central banks is likely to weigh on equity markets as inflation remains the key focus. Fed fund futures one year forward has priced in another 2 percentage points rate hikes to 3% and ECB President Lagarde has backed calls for policy normalisation. This is taken to mean two 25 bps hikes to its deposit facility rate, bringing it to zero later this year. Central banks now see the urgency to tighten policy to curb excess demand amid rising prices. CPI inflation in the US remains above 8% and the Fed’s preferred measure, the PCE inflation rate, has averaged 5% since December 2021. In Europe, despite an unemployment rate of just under 7%, the higher energy cost has pushed CPI inflation to above 8% in May.

The peak in inflation this cycle appears within reach but it would be difficult to push it back to the pre-COVID level of 2%. For the time being, central banks’ rhetoric remain hawkish, which is why we fear the narrative of stagflation will turn into recession if the Fed continues to tighten into next year. Meanwhile, bond yields have raced ahead to price in higher rates. It is not surprising that for May, the JACI Investment Grade Index returned just 0.2% (in USD terms) and the fear of recession along with successive 50 bps hikes in rates drove the JACI High Yield Index down 2.8% (in USD terms).

### Investment Outlook

In the US, the economy is running on overdrive and the labour market remains very tight. The Fed’s quantitative tightening in the form of c.US\$1 trillion balance sheet assets reduction annually when fully implemented, will withdraw liquidity from the market. Coupled with the Russia-Ukraine conflict which compounded the energy shortage, the likely result is lower price-to-earnings multiples for equity markets over time, so we remain negative on risk-assets which have not accounted for the new paradigm.

Given the record level of indebtedness by governments, corporate and household sectors, the likelihood of the Fed successfully engineering a soft landing will be difficult. The pace of hikes and Fed communication will be key to market performance. On the other hand, markets should be relieved that the Chinese government has ended the lockdown imposed on Shanghai and other cities. Its CNY14.8trillion (US\$2.3 trillion) proposed infrastructure spending to kickstart the economy should commence within months. More is expected to follow since China’s leaders have pledged to meet its growth target of around 5.5% this year at the Politburo meeting in April. Downside risks will escalate the longer China withholds from stimulating its economy.

### Investment Strategy

#### Asset Allocation

The Fund continues to underweight equity, given our more cautious stance on risk assets, but will tactically adjust the exposure from time to time. Global central banks have few alternatives but to tighten financial conditions aggressively to anchor inflation and inflation expectations.

#### Fixed Income

In Asia credit, the Fund remain defensively positioned with high quality credit selection. We are positive on duration when the 10-year Treasury yield is above 3% as the risk of a recession will increase if central banks continue to hike in a declining growth momentum.

#### SREITs

Singapore’s re-opening phase has gone well. Portfolio is focused on bottom-up selection on REITs and have exposure in selected retail and office. Within the REITs, we will continue to look for names that have acquisition potential with strong fundamentals, coupled with valuations that remain attractive and have growth potential.

## Performance (%)

	1 month	3 months	6 months	1 year	3 years	5 years	Since Inception
<b>A-SGD</b> (bid-to-bid)	-0.91	-2.65	-6.61	-11.21	-1.00	-	-0.98
