Fullerton SGD Income Fund - Class R

March 2026

Investment Objective

The investment objective of the Fund is to generate long term capital appreciation and/or income for investors in SGD terms by investing primarily in fixed income or debt securities.

Investment Focus and Approach

The Managers seek to add value from interest rate accruals, selection of bonds and/or credits and duration management (optimisation of bond returns by selecting bonds with different terms to maturity). The Fund will invest in a diversified portfolio of primarily investment grade fixed income or debt securities having a minimum long term credit rating of BBB- by Fitch, Baa3 by Moody's or BBB- by Standard & Poor's (or their respective equivalents) and cash.

The Fund may also invest in non-investment grade bonds (i.e. bonds with a long term credit rating of less than BBB- by Standard & Poor's, Baa3 by Moody's or BBB- by Fitch (or their respective equivalents)) of up to 30% of its Net Asset Value.

The Fund may invest in Singapore Dollar and foreign currency denominated bonds including but not limited to US Dollar, Euro, Japanese Yen and Australian Dollar. The foreign currency denominated bonds will be fully hedged back to the Singapore Dollar except for a 5% frictional currency limit.

Performance (%)

	1 mth	3 mths	6 mths	1 yr	3 yrs	5 yrs	SI. Ann. Ret.	SI. Ann. Vol.
Fund (bid-to-bid)	-1.69	-0.85	-0.49	4.70	5.25	0.16	2.27	4.78

Returns of more than 1 year are annualised. Returns are calculated on a single pricing basis in SGD with net dividends and distributions (if any) reinvested.

Market Review

Bond markets in March were dominated by a sharp repricing of inflation risks following the escalation of the US–Israel–Iran conflict, which drove a surge in oil prices and brought stagflation concerns to the forefront. Central bank expectations shifted materially, with markets scaling back prior expectations of rate cuts and, in some cases, repricing towards a more hawkish path. Against this backdrop, US Treasury yields moved significantly higher, with the 10-year yield rising by around 38bps over the month to approximately 4.3%.

Over in Singapore, MAS core inflation edged up to 1.4% y/y in February, while headline inflation eased to 1.2% on softer accommodation and transport costs. Growth signals were mixed: Non-Oil Domestic Exports (NODX) extended its expansion but moderated, industrial production dipped slightly after a strong prior month, while retail sales were weaker year-on-year due to seasonal effects but remained firm on a sequential basis, pointing to resilient underlying consumption.

Against this backdrop, Singapore Government Securities (SGS) yields also moved higher but outperformed US Treasuries on a relative basis, with the 10-year yield rising by around 34bps to approximately 2.9%. SGD non-government bonds also registered negative returns over the period, reflecting the broader rates-driven sell-off. However, they outperformed SGS, as reflected in the Markit iBoxx Singapore Non-Government Index. Elsewhere, the Asian credit markets, as represented by the JPM Morgan Asian Credit Index in USD, delivered negative returns over the month, driven primarily by adverse duration-related returns as US Treasury yields moved higher. While coupon income provided some offset, both US Treasury returns and spread returns detracted, with the former being the dominant driver. Within the index, investment grade proved relatively more resilient, with more contained spread widening, while the high yield segment underperformed due to significantly wider spreads.

Investment Strategy

The geopolitical situation in the Middle East remains fluid, and we are monitoring developments closely. The macro impact will depend on how prolonged and severe the disruption becomes, particularly with respect to energy supply and key shipping routes. A more extended episode could lead to higher inflation and, over time, lead to demand destruction, ultimately weighing on global growth. In this context, the direction of US Treasury yields is less straightforward, as markets balance opposing forces: higher inflation pushing yields up, versus growth concerns driving yields lower.

Against a backdrop of heightened tensions in the Middle East, we expect Singapore Government Securities (SGS) to remain relatively resilient, supported by safe-haven demand. Thus far, SGD credit has held up better than USD credit, underpinned by limited primary supply and supportive market technicals. Looking ahead, the Singapore policy outlook remains finely balanced between growth and inflation. On balance, MAS may still opt to modestly steepen the Singapore Dollar Nominal Effective Exchange Rate (S$NEER) slope in April, allowing a stronger SGD to help offset higher imported costs and anchor inflation expectations.

In terms of investment strategies, capital preservation remains a top priority. On that note, we are holding higher level of cash which helps to mitigate near-term drawdowns and preserve capital, while keeping us nimble and ready to re-risk when there is better visibility or if the situation de-escalates. We also reduced duration to lower sensitivity to rate volatility. In terms of high yield exposure, we trimmed positions at the margin, while continuing to focus on active position management and trading around existing holdings rather than making wholesale changes to our overall stance. Beyond the Middle East, we are closely monitoring the broader impact on supply chains and energy markets, as any prolonged disruption could affect companies across regions and sectors. Our credit analysts are stress-testing issuers that could be more vulnerable if the situation drags on, with particular attention to funding needs and liquidity profiles. Overall, the portfolio remains well diversified across countries, sectors and issuers, and we are maintaining a defensive but nimble stance, focused on capital preservation while staying ready to deploy risk selectively as opportunities arise.
