Fullerton Short Term Interest Rate - Class B (SGD) - Brunei

September 2026

Investment Objective

The investment objective of the Fund is to achieve medium-term capital appreciation for investors. The investments of the Fund will be broadly diversified with no specific industry or sectoral emphasis.

Investment Focus and Approach

The Fund is primarily focused on fixed income securities and money market instruments. The Fund may invest in futures and derivatives for hedging purposes. The maturity limit of underlying securities is 5 years and all foreign currency denominated bonds are fully hedged back to SGD except for a 5% frictional currency limit.

Performance (%)

	1 mth	3 mths	6 mths	1 yr	3 yrs	5 yrs	10 yrs	Sl. Ann. Ret.	Sl. Ann. Vol.
Fund (bid-to-bid)	-0.60	-0.63	-0.03	0.41	3.62	1.74	2.23	3.12	1.42
Fund (offer-to-bid)	-3.50	-3.53	-2.94	-2.51	2.60	1.14	1.92	2.96	NA
Benchmark	0.15	0.44	0.85	1.76	3.05	2.77	1.91	1.26	NA

Returns of more than 1 year are annualised. Returns are calculated on a single pricing basis in SGD with net dividends and distributions (if any) reinvested. Offer-to-bid returns include an assumed preliminary charge of 3% which may or may not be charged to investors.
Benchmark: 3M SORA + 0.60% p.a.
With effect from 1 August 2023, the benchmark is 3M SORA + 0.60% p.a. From inception till 31 July 2023, the benchmark was 3M SIBID.

Market Review

Singapore government bonds weakened in September amid the broader rise in global government bond yields, although SGS outperformed US Treasuries. Yields rose across the SGS curve, led by shorter and intermediate maturities, with the 2-year yield increasing 29bps to 2.0% and the 10-year yield rising a more modest 11bps. The domestic macroeconomic backdrop remained firm: August non-oil domestic exports surged 46.2% year-on-year, led by electronics, while manufacturing output increased 15.4%. The MAS Survey of Professional Forecasters released during the month raised its median 2026 GDP growth forecast to 5.0% from 3.5%, while August MAS core and headline inflation edged higher to 2.2% and 2.3% year-on-year, respectively. There was no MAS monetary policy review in September, with the next review scheduled for October.

Global rates nevertheless provided a challenging backdrop, as US Treasuries sold off sharply following a 25bp Fed rate hike, stronger economic data and higher oil prices, alongside concerns over inflation and increased US government borrowing. The US Treasury curve bear-flattened, with 2-year and 10-year yields rising 55bps and 53bps respectively, compared with a 39bp increase in the 30-year yield; the 10-year yield reached levels last seen in 2007.

Against this backdrop, Singapore non-government bonds also declined over the month and underperformed SGS, as measured by the Markit iBoxx ALBI Singapore Non-Government Index in SGD terms. Elsewhere, Asian US dollar credit markets also posted negative returns, as measured by the J.P. Morgan Asia Credit Index, primarily reflecting the sharp rise in US Treasury yields. Investment-grade bonds underperformed their high-yield counterparts given their longer duration and greater sensitivity to the rise in underlying government bond yields. High-yield credits proved relatively more resilient, supported by stronger spread performance and their lower duration profile.

Investment Strategy

Globally, we view the Fed's latest rate hike to form part of a relatively shallow tightening cycle rather than the start of a prolonged period of rate increases. Further measured tightening should help reinforce the Fed's policy credibility and anchor inflation expectations, providing greater stability to long-end Treasury yields. This is particularly important given the greater transmission of long-term borrowing costs to interest-rate-sensitive areas of the economy, including housing.

The US economy also remains relatively well positioned to absorb some additional policy tightening. Growth remains resilient, unemployment is low, corporate interest burdens are manageable, and investment and consumer spending remain solid. Robust productivity growth is supporting corporate earnings, while longer-term market-based inflation expectations remain relatively contained. Together, these factors reduce the risk that a limited amount of further tightening translates into significant stress for the broader economy or credit markets.

In Singapore, inflation remains in the upper half of the forecast range while growth continues to hold up well. Against this backdrop, we expect MAS to increase the rate of appreciation of the S$NEER policy band slightly again in October. While near-term rate volatility may remain elevated, the rise in yields has created increasingly attractive opportunities in SGD bonds for investors able to take a longer-term perspective.

Within the portfolio, we favour SGD credit over USD credit, with a greater contribution to portfolio duration coming from SGD exposure. We continue to favour this positioning given the more supportive supply-demand technicals for SGS relative to US Treasuries. Limited SGS supply heading into year-end, alongside structural domestic demand and Singapore's AAA sovereign credit rating, should continue to underpin the SGD bond market. The relative value case for SGD credits is further supported by the relatively high cost of hedging USD exposure back into SGD, which can significantly erode the incremental yield offered by USD credit.
