

Fullerton USD Income Fund - Class D (EUR Hedged)

April 2026

Investment Objective

The investment objective of the Fund is to generate long term capital appreciation and/or income for investors by investing primarily in fixed income or debt securities.

Investment Focus and Approach

The Fund will invest in a diversified portfolio of primarily investment grade fixed income securities having a minimum long-term credit rating of BBB- by Fitch, Baa3 by Moody's or BBB- by Standard & Poor's (or their respective equivalents) and cash. The Fund may also invest in non-investment grade bonds of up to 30% of its Net Asset Value. Non-rated bonds are permitted if they meet the Managers' internal equivalent rating of investment grade. The Fund aims to invest at least 50% of its Net Asset Value in USD denominated bonds. The Fund will be broadly diversified with no specific geographical or sectoral emphasis.

The Managers may use Financial Derivative Instruments (FDIs) for hedging and efficient portfolio management purposes.

Performance (%)

	1 mth	3 mths	6 mths	1 yr	3 yrs	5 yrs	10 yrs	Sl. Ann. Ret.	Sl. Ann. Vol.
Fund (bid-to-bid)	2.08	-0.65	-0.35	7.39	4.16	-1.28	0.26	0.25	5.16
Fund (offer-to-bid)	-0.89	-3.55	-3.26	4.27	3.14	-1.86	-0.04	-0.05	NA

Returns of more than 1 year are annualised. Returns are calculated on a single pricing basis in EUR with net dividends and distributions (if any) reinvested. Offer-to-bid returns include an assumed preliminary charge of 3% which may or may not be charged to investors.

Market Review

Global developed markets in April were driven more by geopolitical developments than macro-economic data, with the Iran–Middle East–US conflict dominating sentiment. While risk appetite improved over the course of the month, evidenced by a rebound in equities and lower volatility, oil prices remained elevated, reinforcing inflation concerns and keeping bond yields biased higher. Against this backdrop, the US Federal Reserve (Fed) left policy rates unchanged, but the decision was interpreted as hawkish given dissent among FOMC members and a reduced easing bias. This led to a repricing at the front end of the curve, with 2-year US Treasury yields rising, while 10-year yields ended the month modestly higher at around 4.4%, having traded within a relatively contained range.

Asian credits nonetheless delivered positive returns in April, as reflected by the J.P. Morgan Asia Credit Index, driven primarily by spread tightening, which more than offset the drag from higher underlying US Treasury yields. Within the asset class, high yield outperformed investment grade, supported by stronger spread compression and higher carry, while investment grade posted more modest gains given its greater sensitivity to duration. Improved risk sentiment also supported a pickup in primary market activity following the lull in March. At the country level, higher-beta markets such as Sri Lanka, Pakistan and Mongolia led performance, driven by strong spread compression, while more defensive markets including Singapore, Korea and China lagged, with more modest spread tightening. From a sector perspective, Metals & Mining and Consumer sectors were among the top performers, benefiting from stronger spread compression and sustained demand for carry, while Real Estate, Technology, Media, & Telecom (TMT) and Industrials underperformed on a relative basis, albeit still delivering positive returns overall.

Investment Strategy

The outlook for USD credit remains cautiously constructive as markets increasingly look through the Middle East conflict, with the probability of a more severe tail-risk scenario appearing less remote for now. While geopolitical tensions remain elevated, markets appear more conditioned to absorb headline volatility unless there is a material escalation from here on. Nevertheless, risks remain elevated, particularly with oil prices still trading at high levels and U.S. Treasury yields remaining sticky, suggesting markets continue to demand compensation for inflation and geopolitical uncertainty. As such, we expect volatility to remain two-sided, although the magnitude of market drawdowns could be more contained compared to earlier in the year.

Against this backdrop, we remain selectively constructive on credit and continue to view periods of market weakness as opportunities to add risk, provided broader policy support and market liquidity conditions remain intact. We believe credit technicals should remain supportive in the near term as markets continue to recover from the March sell-off, although valuations across parts of the market have become less compelling following the sharp rebound. At the same time, we continue to closely monitor indicators such as a sustained move in the U.S. 10-year Treasury yield above 4.5% or a meaningful deterioration in broader equity market momentum, which could signal a less supportive backdrop for risk assets.

While we have selectively extended duration more recently, we continue to keep overall duration at moderate levels - long enough to benefit should growth or inflation data soften, but not so long as to be overly exposed to a renewed bear steepening in yield curves. In practice, this means we prefer to express risk through credit spread opportunities and issuer selection rather than through large directional duration bets.

From a portfolio positioning perspective, we have actively redeployed cash following the earlier market dislocation, selectively adding risk through both primary and secondary markets while retaining some liquidity in short-dated U.S. Treasury bills to preserve flexibility. We continue to find selective opportunities in higher yielding segments and convertible bonds, where carry and valuations remain relatively more attractive compared to investment grade credit. Within investment grade, valuations in many segments have become less compelling, particularly where spreads have tightened to pre-war tights. As such, we remain selective in deploying capital, focusing on resilient issuers, attractive carry opportunities and maintaining overall portfolio flexibility amid a still-uncertain macro and geopolitical backdrop.
