Fullerton USD Income Fund - Class R (SGD Hedged)

October 2026

Investment Objective

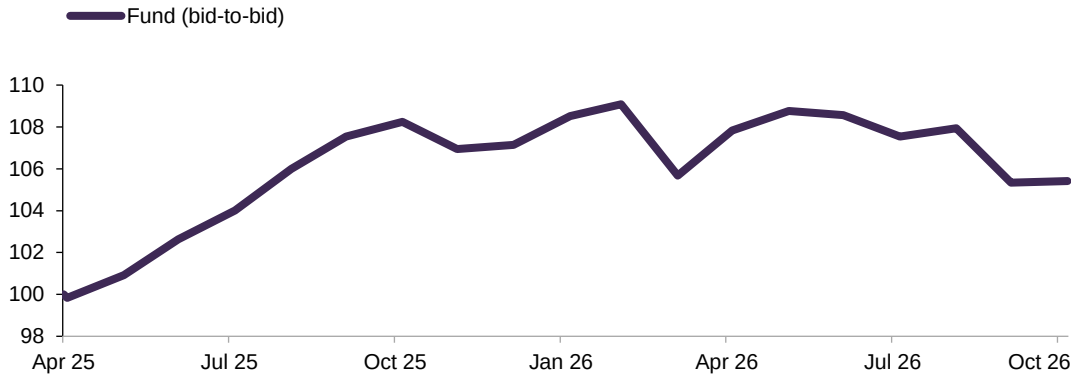

The investment objective of the Fund is to generate long term capital appreciation and/or income for investors by investing primarily in fixed income or debt securities.

Investment Focus and Approach

The Fund will invest in a diversified portfolio of primarily investment grade fixed income securities having a minimum long-term credit rating of BBB- by Fitch, Baa3 by Moody's or BBB- by Standard & Poor's (or their respective equivalents) and cash. The Fund may also invest in non-investment grade bonds of up to 30% of its Net Asset Value. Non-rated bonds are permitted if they meet the Managers' internal equivalent rating of investment grade. The Fund aims to invest at least 50% of its Net Asset Value in USD denominated bonds. The Fund will be broadly diversified with no specific geographical or sectoral emphasis.

The Managers may use Financial Derivative Instruments (FDIs) for hedging and efficient portfolio management purposes.

Performance (%)

	1 mth	3 mths	6 mths	1 yr	Sl. Ann. Ret.	Sl. Ann. Vol.
Fund (bid-to-bid)	0.02	-2.11	-2.51	-3.15	2.99	4.85

Returns of more than 1 year are annualised. Returns are calculated on a single pricing basis in SGD with net dividends and distributions (if any) reinvested.

Market Review

Asian credit markets, as represented by the JPMorgan Asia Credit Index (JACI), delivered positive returns in USD terms in October, primarily driven by gains in US Treasuries. The US Federal Reserve (Fed) kept its policy rate unchanged at 3.75–4.00%, amid resilient economic growth and persistent inflation pressures, although labour market conditions showed signs of softening. US Treasury yields initially rose to multi-year highs before reversing course as concerns over the technology and AI sectors triggered safe-haven demand. Consequently, the 10-year US Treasury yield declined by 36 basis points (bps) to 4.9%, while the 2-year yield fell by 30bps to 4.6%.

Despite positive duration-related returns, Asian credit performance was partially offset by credit spread widening across the region. Investment grade bonds significantly outperformed their high yield counterparts, benefiting from their greater interest rate sensitivity and relatively more resilient spread performance. In contrast, high yield bonds recorded negative returns as pronounced spread widening more than offset gains from US Treasuries and coupon carry.

At the country level, Taiwan, Malaysia and Singapore were the strongest performers, with gains from declining US Treasury yields more than offsetting the drag from credit spread widening. Conversely, Pakistan, Sri Lanka and Mongolia were the weakest performers, as significant spread widening outweighed positive duration-related returns.

At the sector level, Oil & Gas, Diversified and Industrial led performance, supported by positive duration-related returns that more than offset negative spread contributions. In contrast, Real Estate was the weakest-performing sector, weighed down by significant spread widening. Liquidity concerns surrounding Zhuhai Huafa, a Chinese local government financing vehicle, emerged as a contagion trigger in late October, sparking a broader sell-off across China's high yield property sector. The resulting spread-related losses more than offset positive duration-related returns.

Investment Strategy

We entered the fourth quarter with defensive portfolio positioning, reflecting our cautious near-term outlook amid elevated interest rate volatility, geopolitical uncertainties and broader market risks. Bond yields have risen materially since the start of the year, particularly at the short end, while inflation risks remain elevated amid ongoing geopolitical tensions in the Middle East.

Against this backdrop, we remain cautious over the next three months but are more constructive over a 12-month horizon, as a potential moderation in US growth and inflation could create a more supportive environment for fixed income in 2027. Recent market weakness has also created more attractive valuations across selected credit segments, although we prefer to remain patient and selective, monitoring upcoming risk events, corporate earnings and developments in the Middle East. In the meantime, prevailing yields offer attractive carry, with opportunities to gradually extend duration and selectively increase credit exposure as market conditions become more favourable.

In line with our cautious near-term outlook, we have maintained a defensive portfolio stance, prioritising capital preservation and liquidity while retaining flexibility to capitalise on market dislocations. We have reduced duration exposure by trimming selected long-dated bonds, lowered our Middle East credit holdings and further reduced our exposure to Additional Tier 1 (AT1) securities to manage overall portfolio beta. At the same time, we have selectively added attractively valued securities, including convertible bonds. For now, we favour disciplined risk management and selective opportunities over a broad increase in credit exposure, while remaining prepared to rebuild risk positions as market conditions and valuations become more supportive.
